Mahoning Valley Electrical Contractors (MVEC) is a coalition of highly skilled and reliable world-class electrical contractors that serve Northeastern Ohio, Western Pennsylvania and regions beyond. MVEC is affiliated with the National Electrical Contractors Association (NECA) and guarantees a qualified and reliable drug-free work force for all response, commercial, industrial, residential, maintenance and tech driven projects.

24-Hour Response Service | Fast around the clock service. Safety and emergency response.

Commercial & Industrial | Developmental projects, including: service industry facilities, skyscrapers, office complexes, shopping centers, entertainment complexes and multi-building establishments.

Residential Applications | New construction and remodeling residential installation to ensure safe electrical flow and room for future upgrades and improvements.

Repair, Maintenance & Response Service | Day-to-day service, electrical replacement, troubleshooting, maintenance, repair and prevention.

Construction & Installation | Code compliant ground-up construction installation.

Direct Digital Controls | Hook up and synchronization of HVAC automation and multifaceted controls.

Generator Set | Power generation and proper installation of code-compliant, on-site generator sets.

High Voltage | Installation, maintenance and testing of complex cabling, stress cones, transformers, high voltage equipment and direct large capacity power.

Life Safety | Customized safety and security systems for homes and businesses including fire and security alarm systems.

Lightning Protection | Lightning and outside line protection to prevent damaging surges.

Motor Controls & Repair | Position planning, connection, termination, installation, maintenance and ground fault protection for motor controls, including: simple toggle switch and complex systems.

Multi-Media & Communication Technology | Installation of state-of-the-art communication systems, fiber-optic audio and video networks in accordance with EIA/TIA standards.

Power Quality | Power stabilization and disturbance prevention, quality diagnostics, testing and monitoring of low-voltage, fast-switching electronic equipment

Solar Energy Systems | Solar energy supply and maintenance to power grids through integration of solar panels into the design of buildings for alternative energy options.

Temporary Power Systems | Power supply in an environment that is reliable, clean and highly efficient, including conventional gasoline, diesel fuel, fuel cells, flywheels, natural gas, micro turbines and solar arrays.

Voice, Data & Video | Complete range of customized voice/data/video (VDV) service installations through assessment, installation and maintenance of complex digital LAN, PBX and public telephone networks.

Plug Into Green

The use of electricity is key to creating a sustainable environment. Together, our contractors have a collective goal to consistently increase energy efficiency and will partner with you to ensure your space is environmentally friendly with a minimal carbon footprint.
